

CASE STUDY

AttyJuan.ai

AI-Powered Legal SaaS Platform — Co-Founded & Engineered

THE PROJECT

AttyJuan.ai — a multi-tenant case-management platform built specifically for Filipino solo lawyers and small law firms. Think “Google Calendar meets Notion meets an AI legal assistant,” purpose-built for the Philippine legal context.

THE PROBLEM

Philippine lawyers run their practice on physical folders, spreadsheets, WhatsApp groups, and memory. Every major legal tool (Clio, MyCase, PracticePanther) is built for the US market — wrong pricing, wrong compliance, wrong workflows. Lawyers miss hearings, lose documents, and burn hours on admin instead of legal work.

WHAT I BUILT

- Multi-tenant SaaS architecture with strict Row-Level Security (RLS) — every firm's data fully isolated
- Full case management — client records, court details, status tracking, case timelines
- AI document pipeline: upload a PDF/Word file, GPT-4o Mini returns a structured summary (parties, issues, key dates)
- Context-aware AI assistant answering natural-language questions using only the lawyer's own data
- Calendar & scheduling system with conflict detection and automated email reminders
- Tiered subscription billing wired to PayMongo (GCash/Maya) and Stripe webhooks

TECH STACK

Next.js 15 • Supabase (PostgreSQL + RLS) • Tailwind CSS v4 • OpenAI GPT-4o Mini • TanStack Query • PayMongo • Stripe

THE RESULT

- A production-grade, multi-tenant SaaS platform — architected and engineered solo as co-founder
- AI features that turn hours of document review into minutes
- First purpose-built case-management tool for the Philippine legal market

“I don't just build websites — I build systems that run businesses.”

— Dann Lopez, Full-Stack & AI Developer

WHAT THIS MEANS FOR YOUR BUSINESS

This is the same engineering approach I bring to every project — secure multi-tenant architecture, AI integrations, real authentication & payments, and dashboards that actually save people time. Booking systems, client portals, internal tools, or AI-powered features bolted onto your existing site — I build it production-grade from day one.

Ready to start?

Message me with what you're trying to build and I'll map it to the right package — **Basic** (landing page), **Standard** (+ full SEO), or **Premium** (+ management dashboard, blog, and custom features like the ones above).
